

The black box for AI.

Cryptographic Observability & On-chain Ledger — a durable, independent, hardware-backed record of what an AI actually did.

cool.complete(prompt)

Verify a receipt →

CINERATIC HERO — sealed-enclave / black-box animation loop — scroll-triggered

• This is the only page an investor sees after 100 reels. Question it must answer: "Can these people actually build this?"

LAYER 01 The Movie — sell the vision

emotion · belief · conviction

§00 THE PROBLEM

When AI decides and someone is harmed, no one can prove what it did.

01

02

03

04

§25 WHY COOL WINS

Without Cool, every network rebuilds trust from scratch.

✗ WITHOUT COOL

Every network → builds everything → waste

✓ WITH COOL

Plug → Trust → Done

• Animated split-screen on scroll — the "aha" for the business model

LAYER 02 The Engineer — now prove it

interactive · inspectable · downloadable

§01 LIVE ARCHITECTURE

The whole system, click any block to open it.

Not an image — an interactive diagram. Every node expands to internals + downloadable docs.

Application → cool.complete() → PQC Handshake → TEE → Attestation → Merkle Log → Blockchain → Verifier

• CLICK a node → panel slides open with internals + "download docs"

§02 - §16 LIVE SDK · ONE-LINE INTEGRATION

Change one line. Keep everything else.

```
// before
OpenAI.complete(prompt)

// after
cool.complete(prompt)
```

[Copy](#) [GitHub ↗](#) [Docs](#) [↗ diff animates line-swap on view](#)

§03 INTERACTIVE INFERENCE JOURNEY

Follow one request through the machine.

Prompt → Encryption → TEE → Attestation → Receipt → Merkle tree → Anchor → Verification

progress rail — each stage lights up in sequence — ~30s autoplay + scrubber

§04 - §14 VERIFY RECEIPT · LIVE VERIFIER

Verify a real receipt yourself. Offline. Without us.

PASTE RECEIPT JSON

{ receipt ... }

► Verify

CHECKS

✓ Signature valid

✓ Timestamp valid

✓ Merkle proof valid

✓ Anchor valid

✓ Hardware valid

• each row animates its check in turn — green cascade

§05 "BREAK IT" — THE VIRAL MOMENT

Tamper with one byte. Watch everything fail.

! Tamper receipt

receipt bytes — one flips red on click

Hash ✗ fails

Signature ✗ fails

Merkle ✗ fails

Verification ✗ REJECTED

§08 INTERACTIVE MERKLE TREE

One leaf. One proof. One root.

tree visual — click a leaf, path to root highlights, inclusion proof shown

§09 TRANSPARENCY LOG VIEWER

Append-only. Try to delete a row.

receipt_id	ts	root_hash

• delete attempt → row shakes, "append-only" toast

§10 TEE EXPLORER

Look inside the enclave.

Outside ↓ Encrypted chamber ↓ Model ↓ Output ↓ Attestation

glass-cube 3D enclave — cinematic, rotatable

§11 CRYPTOGRAPHY STACK

Every primitive, and why it's here.

ML-DSA signatures [why? expand](#)

ML-KEM key exchange [why? expand](#)

ChaCha20 encryption [why? expand](#)

SHA-256 hashing [why? expand](#)

§12 TRUST DOMAINS

Break one. The system survives.

HW Hardware SW Software ⚡ Crypto II Blockchain

• toggle a domain "broken" → survival state recomputes live

§13 RECEIPT ANATOMY

One receipt, taken apart.

Model hash Weight hash Prompt hash Output hash

Timestamp TEE quote Signature Anchor

• hover any field — plain-language explanation

§15 INTEGRATION PARTNERS

Works with the infrastructure you already run.

Phala Marlin Atoma Bittensor

AWS Nitro Intel TDX NVIDIA CC + more

LAYER 03 Due Diligence — where investors disappear for an hour

no marketing — just proof

§30 THE SINGLE MOST IMPORTANT PAGE

Why should you trust Cool?

No claim exists without evidence. Every row links to a live demo, a spec, or an honest status.

CLAIM	EVIDENCE →
One-line SDK	Live demo +
Post-quantum crypto	FIPS 203/204 +
Offline verification	Verify Receipt demo +
Append-only history	Transparency log +
Operator resistance	Threat model +
TEE integration	Honest status: mock+real +
Vendor neutrality	Architecture diagram +
Cross-network design	Integration map +
Performance	Benchmarks (soon)
Roadmap	Public milestone tracker +

§06 - §19 BUILD STATUS · MOCK VS REAL

The dashboard most startups hide.

✓ REAL — SHIPPED

ML-DSA-65

SDK

Verifier

Merkle log

⚠ MOCK — STATED HONESTLY

TEE attestation

Base anchor

🔄 IN PROGRESS

Rust rewrite

Witnesses

NVIDIA CC

• honesty is the feature — this section builds the trust

§07 EVIDENCE EXPLORER

Etherscan for receipts.

🔍 Search receipt ID...

result view — full receipt breakdown + proof chain (demo data)

§20 THREAT MODEL

Everyone who tries to cheat — and why they fail.

Attacker

edit receipt → fails

Cloud provider

reads memory → fails

Operator

forges log → fails

Quantum

breaks RSA → fails

§21 COMPARISON

Compared on the axes that matter.

CAPABILITY	Cool	Others
Operator neutral	✓	✗
Offline verify	✓	✗
Post-quantum	✓	✗
Independent	✓	✗
Hardware bound	✓	✗
Cross-network	✓	✗

§22 BENCHMARKS

Numbers, when they're real.

Latency overhead — soon —

Verification time — soon —

Receipt size — soon —

§17 TIMELINE

Where we are, publicly.

• v0 → MVP → Reference Integration → Enterprise → Government

§24 BUSINESS MODEL

How the wedge expands.

SDK → Networks → Compliance → Enterprise → Government

\$15.8B

\$3–5B

\$15–40M

§18 ENGINEERING PRINCIPLES

Beliefs, not features.

"Don't trust us. Verify."

"Evidence must outlive companies."

"Operator resistance is the product."

"Proof > trust."

"Standards over cleverness."

"Infrastructure should disappear."

§26 FOUNDER WALL

Not resumes — obsessions.

photo Pranaav S — CEO

Why I'm obsessed →

photo Kailosh K — CTO

How I think →

§28 INTERACTIVE FAQ

Every answer ends in evidence.

Why Blockchain?

answer → architecture → demo → RFC

Why post-quantum now?

+

Isn't a TEE enough?

+

What's mocked today?

+

§29 - §27 LIVE GITHUB ACTIVITY · TECHNICAL BLOG

Momentum you can watch.

LATEST BUILD · MILESTONE · FEATURE · RFC

TECHNICAL BLOG · every 2 weeks

§23 RESEARCH LIBRARY

Every spec, in one place.

Whitepaper RFCs FIPS 203/204 Architecture GitHub Investor docs

Fund the evidentiary standard the next decade of regulated AI runs on.
